

CASE STUDY: The History of Water Supply on the Central Coast

APPENDIX 12: Estimation of total annual stream flow in the Central Coast catchment for each year since rainfall records began in 1885. Also shown for comparative purposes are the average annual stream flow estimations over selected periods - i.e. the long term average for the whole period from 1885 to 2006; the average 1900-1949; the average 1950-1990; and the average 1991-2006 (see page 22).
